Course Outline

Java SE 8 Programming

Duration: 5 days (30 hours)

Learning Objectives:

- Creating high-performing multi-threaded applications
- Creating Java technology applications that leverage the object-oriented features of the Java language, such as encapsulation, inheritance, and polymorphism
- Implementing input/output (I/O) functionality to read from and write to data and text files and understand advanced I/O streams
- Executing a Java technology application from the command line
- Manipulating files, directories and file systems using the JDK NIO.2 specification
- Creating applications that use the Java Collections framework
- Performing multiple operations on database tables, including creating, reading, updating and deleting using both JDBC and JPA technology
- Searching and filter collections using Lambda Expressions
- Implementing error-handling techniques using exception handling
- Using Lambda Expression concurrency features

Target Audience:

- Java EE Developers
- Developer
- Java Developers

Prerequisites:

- Java SE 8 FundamentalsNEW

Topics Covered:

- Java Platform Overview
  - Defining how the Java language achieves platform independence
  - Differentiating between the Java ME, Java SE, and Java EE Platforms
  - Evaluating Java libraries, middle-ware, and database options
  - Defining how the Java language continues to evolve
- Java Syntax and Class Review
  - Creating simple Java classes
  - Creating primitive variables
  - Using operators
  - Creating and manipulate strings
  - Using if-else and switch statements
  - Iterating with loops: while,do-while,for,enhanced for
  - Creating arrays
  - Using Java fields, constructors, and methods

- Encapsulation and Subclassing
  - Using encapsulation in Java class design
  - Modeling business problems using Java classes
  - Making classes immutable
  - Creating and use Java subclasses
  - Overloading methods
- Overriding Methods, Polymorphism, and Static Classes
  - Using access levels: private, protected, default, and public.
  - Overriding methods
  - Using virtual method invocation
  - Using varargs to specify variable arguments
  - Using the instanceof operator to compare object types
  - Using upward and downward casts
  - Modeling business problems by using the static keyword
  - Implementing the singleton design pattern
- Abstract and Nested Classes
  - Designing general-purpose base classes by using abstract classes
  - Constructing abstract Java classes and subclasses
  - Applying final keyword in Java
  - Distinguish between top-level and nested classes
- Interfaces and Lambda Expressions
  - Defining a Java interface
  - Choosing between interface inheritance and class inheritance
  - Extending an interface
  - Defaulting methods
  - Anonymous inner classes
  - Defining a Lambda Expression
- Collections and Generics
  - Creating a custom generic class
  - Using the type inference diamond to create an object
  - Creating a collection by using generics
  - Implementing an ArrayList
  - Implementing a TreeSet
  - Implementing a HashMap
  - Implementing a Deque
  - Ordering collections
- Collections Streams, and Filters
  - Describing the Builder pattern
  - Iterating through a collection using lambda syntax
  - Describing the Stream interface
  - Filtering a collection using lambda expressions
  - Calling an existing method using a method reference
  - Chaining multiple methods together
  - Defining pipelines in terms of lambdas and collections
- Lambda Built-in Functional Interfaces
  - Listing the built-in interfaces included in java.util.function
  - Core interfaces - Predicate, Consumer, Function, Supplier
  - Using primitive versions of base interfaces
  - Using binary versions of base interfaces
- Lambda Operations
  - Extracting data from an object using map
  - Describing the types of stream operations
  - Describing the Optional class
  - Describing lazy processing
  - Sorting a stream
  - Saving results to a collection using the collect method

- Grouping and partition data using the Collectors class

- Exceptions and Assertions
  - Defining the purpose of Java exceptions
  - Using the try and throw statements
  - Using the catch, multi-catch, and finally clauses
  - Autoclose resources with a try-with-resources statement
  - Recognizing common exception classes and categories
  - Creating custom exceptions
  - Testing invariants by using assertions
- Java Date/Time API
  - Creating and manage date-based events
  - Creating and manage time-based events
  - Combining date and time into a single object
  - Working with dates and times across time zones
  - Managing changes resulting from daylight savings
  - Defining and create timestamps, periods and durations
  - Applying formatting to local and zoned dates and times
- I/O Fundamentals
  - Describing the basics of input and output in Java
  - Read and write data from the console
  - Using streams to read and write files
  - Writing and read objects using serialization
- File I/O (NIO.2)
  - Using the Path interface to operate on file and directory paths
  - Using the Files class to check, delete, copy, or move a file or directory
  - Using Stream API with NIO2
- Concurrency
  - Describing operating system task scheduling
  - Creating worker threads using Runnable and Callable
  - Using an ExecutorService to concurrently execute tasks
  - Identifying potential threading problems
  - Using synchronized and concurrent atomic to manage atomicity
  - Using monitor locks to control the order of thread execution
  - Using the java.util.concurrent collections
- The Fork-Join Framework
  - Parallelism
  - The need for Fork-Join
  - Work stealing
  - RecursiveTask
  - RecursiveTask
- Parallel Streams
  - Reviewing the key characteristics of streams
  - Describing how to make a stream pipeline execute in parallel
  - List the key assumptions needed to use a parallel pipeline
  - Defining reduction
  - Describing why reduction requires an associative function
  - Calculating a value using reduce
  - Describing the process for decomposing and then merging work
  - Listing the key performance considerations for parallel streams
- Database Applications with JDBC
  - Defining the layout of the JDBC API
  - Connecting to a database by using a JDBC driver
  - Submitting queries and get results from the database
  - Specifying JDBC driver information externally
  - Performing CRUD operations using the JDBC API
- Localization

- Describing the advantages of localizing an application
- Defining what a locale represents
- Read and set the locale by using the Locale object
- Building a resource bundle for each locale
- Calling a resource bundle from an application
- Changing the locale for a resource bundle
